The Food and Agriculture Organization of the United Nations (FAO) Project TCP/INT/3502 “Reducing and Managing the Risks of Acute Hepatopancreatic Necrosis Disease (AHPND) of Cultured Shrimp” was developed to generate a better understanding of this serious disease of cultured penaeid shrimp. The following countries participated in this interregional TCP project: Colombia, Ecuador, Guatemala, Honduras, Mexico, Panama and Peru from the Latin America and the Caribbean (LAC) region, and India, the Islamic Republic of Iran, the Philippines and Sri Lanka from the Asian region.

Through an agreement between FAO and the Asian Fisheries Society (AFS) signed in September 2017, it was mutually agreed to publish the 23 papers contained in this special volume based on the technical presentations that were delivered during two workshops, namely: (1) International Technical Seminar/Workshop: “EMS/AHPND: Government, Scientist and Farmer Responses”, held from 22–24 June 2015 in Panama City, Panama; and (2) Second International Technical Seminar/Workshop on AHPND: “There is a Way Forward”, held from 23–25 June 2016 in Bangkok, Thailand, as well as results of the work generated from an earlier FAO project “TCP/VIE/3304 (E) Emergency assistance to control the spread of an unknown disease affecting shrimps”. This volume addresses a wide range of topics and is aimed at updating the knowledge and experiences in dealing with AHPND and related topics from the perspectives of the government, academe and producer sectors.

Delegates representing the project participating countries, and all participants from government, producer and academic sectors who attended the Panama and Bangkok AHPND technical seminars are sincerely thanked for the genuine exchange of policy, field, technological and scientific information and experiences which made for lively discussion. The authors and co-authors of the papers are also gratefully acknowledged for their contributions and for patiently providing the required clarifications and other detailed information requested by the editors of the volume and the AFS journal.

The officials and staff of the FAO Representations in Panama and Thailand and the staff of the Aquaculture Branch (FIAA, L. Falcone, E. Irde) and the Statistics and Information Branch (FIAS, M. Guyonnet) and senior management of the FAO Department of Fisheries and Aquaculture, are all gratefully acknowledged for operational and logistical support during the preparation and implementation of the project and finalization of this document.

Dr J. Richard Arthur (FAO Consultant) and Dr Melba B. Reantaso (FAO Aquaculture Officer and Lead Technical Officer of the above three projects) served as co-editors of the volume. Prof Mohammed Shariff and his team provided the publication style guidelines of the AFS journal.
